

Job Market Analytics Dashboard

Step 9 — GitHub Repository + Railway Deployment

Step 9 Overview

Status: ✓ Complete

Created a public GitHub repository, pushed all project code, configured Railway to auto-deploy from GitHub, resolved all build errors, and successfully deployed the Job Market Analytics Dashboard to production.

9.1 Live URLs

Resource	URL
Live Dashboard	https://job-market-dashboard.up.railway.app/
Jobs Listing	https://job-market-dashboard.up.railway.app/jobs
GitHub Repository	https://github.com/Shakir-Raza/job-market-dashboard

Result: ✓ Dashboard live and accessible globally.

9.2 GitHub Setup

Commands used to initialize and push the repository:

```
git init
git add .
git commit -m "initial commit - job market dashboard"
git branch -M main
git remote add origin https://github.com/Shakir-Raza/job-market-dashboard
git push origin main --force
```

The --force flag was needed because the GitHub repo was created with a README which created a conflict with the local commit history.

9.3 Railway Configuration

Setting	Value
Project name	secure-creativity
Service name	web
Builder	Railpack v0.30.0
Python version	3.11.9 (from runtime.txt)
Start command	gunicorn app:app (from Procfile)
Region	US West (sfo)
Deploy trigger	Auto-deploy on every GitHub push to main
Live URL	https://job-market-dashboard.up.railway.app/

9.4 Environment Variables Set in Railway

Variable	Purpose
ADZUNA_APP_ID	Adzuna API application identifier
ADZUNA_API_KEY	Adzuna API authentication key
SUPABASE_URL	Supabase project URL for job-market-dashboard project
SUPABASE_KEY	Supabase publishable key for read operations
SUPABASE_SERVICE_KEY	Supabase secret key for write operations

SECRET_KEY	Flask session security key
MISE_PYTHON_GITHUB_ATTESTATIONS	Set to false — disables GitHub attestation check for Python install

9.5 Build Errors Encountered & Fixed

Error	Cause	Fix
mise ERROR: No Github attestation found	Railway installation found Python binary from GitHub	Add MISE_PYTHON_GITHUB_ATTESTATIONS=false to Railway variable
numpy==2.5.0 not found	numpy 2.5.0 does not exist for Python 3.11	Change numpy==2.5.0 to numpy==2.2.6 in requirements.txt
CSS not loading on live site	Folder named CSS (uppercase) — Linux is case sensitive	git mv static/CSS static/css then git mv static/css_temp static/css
git push rejected (fetch first)	GitHub repo had a README commit not in local git push	Use git push origin main --force

9.6 How Auto-Deploy Works

Every time you push code to GitHub, Railway automatically detects the push and starts a new deployment. The process:

Stage	What happens	Time
1. Initialization	Railway detects GitHub push, pulls latest code	~3s
2. Build	Reads runtime.txt → installs Python 3.11.9, reads requirements.txt → pip installs all packages	~2s
3. Deploy	Reads Procfile → starts gunicorn app:app	~5s
4. Post-deploy	Health check, service goes online	~0s
TOTAL		~30s

9.7 Separation from Portfolio

The dashboard is deployed as a completely separate Railway project and Supabase instance from the portfolio. This means:

Aspect	Portfolio	Job Market Dashboard
Railway project	helpful-commitment	secure-creativity
Supabase project	Portfolio (Tokyo)	job-market-dashboard (Singapore)
GitHub repo	Shakir-Raza/portfolio	Shakir-Raza/job-market-dashboard
Live URL	shakirraza.up.railway.app	job-market-dashboard.up.railway.app
Database tables	projects	jobs

Build Progress

Step	Description	Status
1	Project setup — venv, packages, file structure, local Flask server	✓ Done
2	Adzuna API — register, get keys, write fetch_jobs.py, pull live data	✓ Done
3	Data cleaning — Pandas, normalize fields, extract skill tags	✓ Done
4	Supabase — create jobs table, store 438 jobs from UK + US	✓ Done
5	Dashboard route — query Supabase, compute analytics, render template	✓ Done
6	Plotly charts — skills, location, salary interactive charts	✓ Done
7	Jobs listing page — /jobs route with location and category filters	✓ Done
8	UI polish — dark CSS theme, nav, responsive layout, salary fix	✓ Done
9	GitHub repo + Railway deployment — live at job-market-dashboard.up.railway.app	✓ Done
10	Add to portfolio via /admin	Next →

11	(Stretch) ML salary prediction model
